Hi Renee,

Yes we knew there were SAVs impacted on the Southport site, approximately 1.08 acres. The mitigation plan at Jacks Marina had 3.7 acres of tidal wetland replacement/restoration. I remember Mike had some concerns when he visited the site and the project sponsor agreed to some changes and the Corps agreed to an intensive monitoring plan.

I do believe the permit has been issued. But let me know what your concerns are and I will see if I can get you some answers.

I have a tentative plan to visit the Philly office Thursday, but that is weather dependant. Feel Free to call me if you wish Nonresponsive based on Revault.

J

Hi all,

I briefly spoke with Jeff yesterday regarding Southport. I spoke to him about concerns regarding the mitigation locations but then came across this today as I am trying to wade through other emails.

Attached is a study documenting the presence of a rare SAV in the Southport area. Were we aware of this by chance? Does this change anything in terms of mitigation or consideration or is it even too late? Sorry for not sending this forward sooner.... I got it a couple of weeks ago.....

If someone would like to chat further about this, I'm basically in all week.

Thanks!
